

## Fact Sheet

### What is SeniorMetrix™?

SeniorMetrix™ is the only objective source for evidence-based data to help professionals effectively manage frail and high risk patients. Through our technology, case managers can impartially assess the type, length and anticipated outcome of care for patients who have lost some functional capacity due to illness or injury. In addition, caregivers can use the data to help meet the needs of community residents who have some level of functional impairment impacting their daily lives. Our technology improves the overall result for the individual and reduces the cost of care for that person. SeniorMetrix™ partners with some of the nation's largest health plans to serve more than one million senior Medicare Advantage and Medicaid members.

### Founded

1999
